

WindWorks Design Announces a Parts Store for Wind Synth Controllers

ROCHESTER, NY, March 1, 2007 – WindWorks Design is pleased to introduce an online store offering a selection of repair parts for various music synthesizers and wind controllers, especially Yamaha WX-type wind synth controllers.

If you need something like replacement switches for a WX11, or a thumb bender for a WX7, we can help you. Our WX11 switches are brand new, and available as a replacement set you solder in yourself, or already soldered onto a circuit board that just installs inside your instrument with only the ground wire to solder. We have other parts too, many are new-old stock, others that are refurbished and fully functional. This started as just offering WX11 switches, but we decided our parts inventory was sufficient to expand a bit, but some items we have only one or two available. We also have WX5 parts that are commonly asked for, such as replacement octave key switch covers.

“The online store has a good selection of parts and also some accessories for the care and maintenance of a wind synth controller,” says Mardou Case, WX11 player. “The descriptions and pictures of the parts are good and the interface is easy to use.”
