WindWorks Design Announces *Lighting Stencils* for Visio

ROCHESTER, NY, October 28, 2008:

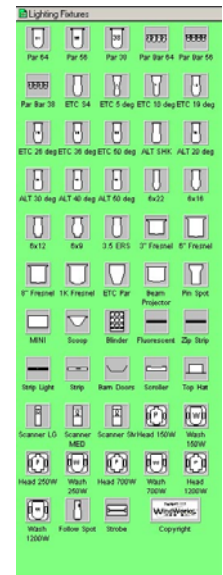

WindWorks Design is pleased to introduce *Lighting Stencils* for Visio.

In response to a lack of stencils for theater and entertainment lighting equipment, WindWorks Design has developed an affordable stencil set based on industry standard drawings and nomenclature. This set goes beyond the basic ellipsoidals and fresnel fixtures and includes several sizes of moving lights, blinders, and striplights. There is also a bonus stencil pack that includes pre-made basic stencils for lighting consoles, audio consoles, distros, stands, and truss.

Lighting designers have many choices these days for CAD tools to use when drawing up a lighting design for theater, concerts, or shows. Many of the CAD tools available are expensive and have a significant learning curve. Yet nearly everyone has access to Visio, and if you can make a picture in PowerPoint, then you can make a drawing in Visio with these Lighting Stencils from WindWorks Design.

“We are deliberately keeping these stencils simple and affordable.” said Art Whitfield, primary lighting designer for WindWorks Design. “These are for users who don’t need complex CAD capabilities, yet still want to produce professional drawings for local theater and entertainment venues”.

Ordering information for the *Lighting Stencils* for Visio is available at <http://WindWorksDesign.com>, on the Lighting page.
